

**APPENDIX B**  
**VERSION WITH MARKINGS TO SHOW CHANGES MADE**  
**37 C.F.R. § 1.121(b)(iii) AND (c)(ii)**

**CLAIMS:**

**AMENDED** 26. A process for forming a multi-ply fiber web comprising:

moving a first belt in a first direction toward a combining section and moving the first belt at a first orientation in the combining section, and forming a first fiber ply on the moving first belt;

forming a second fiber ply on a first wire section wire; advancing the first [fiber] wire section wire with the second ply thereon in a second direction toward the combining section;

combining the first fiber ply on the first belt [on and] with the second fiber ply on the first wire [belt] section wire by applying the first wire section wire onto the first belt in the combining section;

the second fiber ply being formed in a region which, along the first direction of the first belt, lies upstream of the combining section, and running the second fiber ply on [of] the first wire section wire in the second direction into the combining section at an angle with respect to the first orientation of the first belt entering the combining section.
